Writing Basic SQL SELECT Statements

Capabilities of SQL SELECT Statements

Basic SELECT Statement

```
SELECT *|{[DISTINCT] column|expression [alias],...}
FROM table;
```

- SELECT identifies what columns
- FROM identifies which table

Selecting All Columns

SELECT *
FROM departments;

DEPARTMENT_ID	DEPARTMENT_NAME	MANAGER_ID	LOCATION_ID
10	Administration	200	1700
20	Marketing	201	1800
50	Shipping	124	1500
60	IT	103	1400
80	Sales	149	2500
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting		1700

8 rows selected.

Selecting Specific Columns

```
SELECT department_id, location_id
FROM departments;
```

DEPARTMENT_ID	LOCATION_ID
10	1700
20	1800
50	1500
60	1400
80	2500
90	1700
110	1700
190	1700

8 rows selected.

Writing SQL Statements

- SQL statements are not case sensitive.
- SQL statements can be on one or more lines.
- Keywords cannot be abbreviated or split across lines.
- Clauses are usually placed on separate lines.
- Indents are used to enhance readability.

Arithmetic Expressions

Create expressions with number and date data by using arithmetic operators.

Operator	Description
+	Add
-	Subtract
*	Multiply
1	Divide

Using Arithmetic Operators

```
SELECT last_name, salary, salary + 300
FROM employees;
```

LAST_NAME	SALARY	SALARY+300
King	24000	24300
Kochhar	17000	17300
De Haan	17000	17300
Hunold	9000	9300
Ernst	6000	6300

Hartstein	13000	13300	
Fay	6000	6300	
Higgins	12000	12300	
Gietz	8300	8600	
20 rows selected.			

ORACLE

Operator Precedence

- Multiplication and division take priority over addition and subtraction.
- Operators of the same priority are evaluated from left to right.
- Parentheses are used to force prioritized evaluation and to clarify statements.

Operator Precedence

```
SELECT last_name, salary, 12*salary+100
FROM employees;
```

LAST_NAME	SALARY	12*SALARY+100
King	24000	288100
Kochhar	17000	204100
De Haan	17000	204100
Hunold	9000	108100
Ernst	6000	72100

Hartstein	13000	156100
Fay	6000	72100
Higgins	12000	144100
Gietz	8300	99700
20 rows selected.		

Using Parentheses

```
SELECT last_name, salary, 12*(salary+100)
FROM employees;
```

LAST_NAME	SALARY	12*(SALARY+100)
King	24000	289200
Kochhar	17000	205200
De Haan	17000	205200
Hunold	9000	109200
Ernst	6000	73200

Hartstein	13000	157200
Fay	6000	73200
Higgins	12000	145200
Gietz	8300	100800
20 rows selected.		

ORACLE

Defining a Null Value

- A null is a value that is unavailable, unassigned, unknown, or inapplicable.
- A null is not the same as zero or a blank space.

```
SELECT last_name, job_id, salary, commission_pct
FROM employees;
```

LAST_NAME	JOB_ID	SALARY	COMMISSION_PCT
King	AD_PRES	24000	
Kochhar	AD_VP	17000	
Zlotkey	SA_MAN	10500	.2
Abel	SA_REP	11000	.3
Taylor	SA_REP	8600	.2

_			
Gietz	AC_ACCOUNT	8300	
20 rows selected.			

Null Values in Arithmetic Expressions

Arithmetic expressions containing a null value evaluate to null.

SELECT last_name,	12*salary*commission_pct
FROM employees;	
Kochhar	
King	
LAST_NAME	12*SALARY*COMMISSION_PCT
•••	
Zlotkey	25200
Abel	39600
Taylor	20640
•••	
Gietz	
20 rows selected.	

Defining a Column Alias

A column alias:

- Renames a column heading
- Is useful with calculations
- Immediately follows the column name there can also be the optional AS keyword between the column name and alias
- Requires double quotation marks if it contains spaces or special characters or is case sensitive

Using Column Aliases

SELECT FROM	last_name employees;	 commissio	on_pct co	omm
King Kochhar De Haan 20 rows selected	NAME		COMM	
SELECT FROM	last_name employees;	 salary*12	"Annual	Salary"
King Kochhar De Haan	Name	Annual	Salary	288000 204000 204000
20 rows selected				

Concatenation Operator

A concatenation operator:

- Concatenates columns or character strings to other columns
- Is represented by two vertical bars (||)
- Creates a resultant column that is a character expression

Using the Concatenation Operator

```
SELECT last_name|||job_id AS "Employees"
FROM employees;
```

20 rows selected.

Literal Character Strings

- A literal is a character, a number, or a date included in the SELECT list.
- Date and character literal values must be enclosed within single quotation marks.
- Each character string is output once for each row returned.

Using Literal Character Strings

```
SELECT last_name || is a ||job_id
    AS "Employee Details"
FROM employees;
```

```
Employee Details

King is a AD_PRES

Kochhar is a AD_VP

De Haan is a AD_VP

Hunold is a IT_PROG

Ernst is a IT_PROG

Lorentz is a IT_PROG

Mourgos is a ST_MAN

Rajs is a ST_CLERK
```

20 rows selected.

Duplicate Rows

The default display of queries is all rows, including duplicate rows.

```
SELECT department_id
FROM employees;
```

DEPARTMENT_ID	
	90
	90
	90
	60
	60
	60
	50
	50
	50

20 rows selected

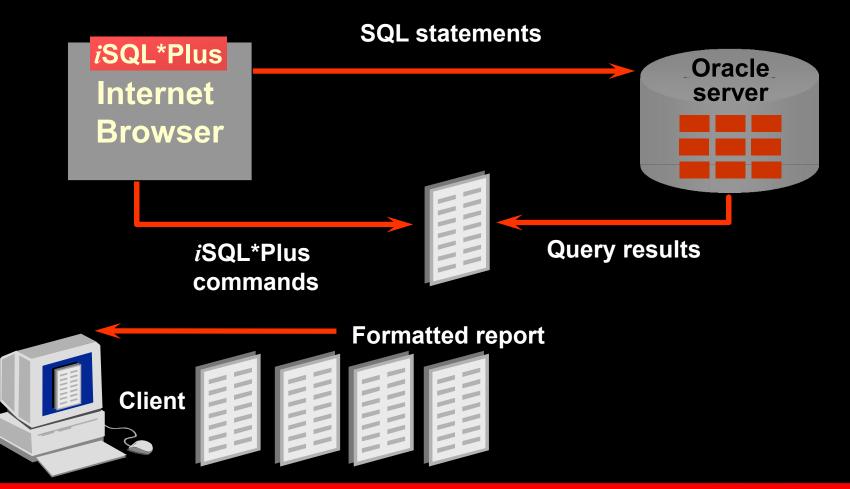

Eliminating Duplicate Rows

Eliminate duplicate rows by using the DISTINCT keyword in the SELECT clause.

```
SELECT DISTINCT department_id
FROM employees;
```

DEPARTMENT_ID	
	10
	20
	50
	60
	80
	90
	110
ows selected.	

SQL and iSQL*Plus Interaction

Overview of iSQL*Plus

After you log into *i*SQL*Plus, you can:

- Describe the table structure
- Edit your SQL statement
- Execute SQL from iSQL*Plus
- Save SQL statements to files and append SQL statements to files
- Execute statements stored in saved files
- Load commands from a text file into the iSQL*Plus Edit window

Displaying Table Structure

Use the *i*SQL*Plus DESCRIBE command to display the structure of a table.

DESC[RIBE] tablename

Displaying Table Structure

DESCRIBE employees

Name	Null?	Туре
EMPLOYEE_ID	NOT NULL	NUMBER(6)
FIRST_NAME		VARCHAR2(20)
LAST_NAME	NOT NULL	VARCHAR2(25)
EMAIL	NOT NULL	VARCHAR2(25)
PHONE_NUMBER		VARCHAR2(20)
HIRE_DATE	NOT NULL	DATE
JOB_ID	NOT NULL	VARCHAR2(10)
SALARY		NUMBER(8,2)
COMMISSION_PCT		NUMBER(2,2)
MANAGER_ID		NUMBER(6)
DEPARTMENT_ID		NUMBER(4)
